

LEED®

SLIMFOLD MIRROR SLIDER TECHNICAL LETTER

Slimfold Mirror Sliders door models contain between 21.96% and 28.23% total applicable recycled content¹ depending on model type. Multiply the cost of the door by the percentage for your model number to determine the final recycled content value applicable to Materials and Resources Credit 4: Recycled Content (LEED-NC). See table on page 2 for recycled content percentage by model number.

Additionally, Dunbarton uses low VOC paints on the door frames, packages their products in recycled boxes, and the door frames are recyclable when it comes time for replacement.

Slimfold Mirror Sliders - 3'0 x 6'8 Doors

Model	Total Assembly % Pre-Consumer	Total Assembly % Post-Consumer	Total Applicable % (Post + 1/2 Pre)
4068 Mirror Sliders	3.91%	26.28%	28.23%
5068 Mirror Sliders	3.43%	23.00%	24.71%
6068 Mirror Sliders	3.05%	20.44%	21.96%

Because frames are considered an assembly product these total have been calculated according to LEED standards by determining the weight of each component and its percentage of recycled content compared to the total weight of the assembly.

¹ Total recycled content is calculated as post-consumer recycled content + 1/2 pre-consumer recycled content.
